June 2017 CORIOmatrix firmware M310_03

New

You can now:

- Use the HDBaseT input module (CM-HDBT-X-2IN-1ETH-FF & CM-HDBT-X-2IN-1ETH) to accept an HDBASET signal directly into the CORIOmatrix.
- Use simultaneous web browser, RS-232 and TCP/IP connections so as to control the CORIOmatrix simultaneously through both interfaces.

Fixed

- Can now use any ASCII character in a password. Previously some passwords, such as those beginning with a number, could be set but could not subsequently be used.
- When switching inputs with fade through black, the switching now reliably occurs when the fade out reaches black.
- Now supports EDIDs of 128 byte size, often used by analogue monitors.
- A resolution of 720x480i59.94 on a DVI input is no longer reported as invalid.

Notes

- If an interlaced source is connected to an input card in slot 1, a monitor card may display magenta output thumbnails.
